01 Identified Users

Primary Users

Teaching Assistants (TAs) and **Instructors** are the core users of our system.

The platform is built mainly to support their academic responsibilities by reducing repetitive tasks, improving communication, and ensuring smoother student query management.

TAs: Use the system to track, summarize, and manage student queries efficiently. They can monitor unresolved doubts, handle escalations, and get quick summaries to prepare for sessions.

Instructors: Use AI-generated analytics, summaries, and automation tools like question paper and slide generators to save time and focus on teaching quality and student engagement.

They are the primary users because the solution directly enhances their efficiency and teaching outcomes.

Secondary Users

Students are the secondary users.

They interact frequently with the platform through the AI assistant and discussion forums but mostly experience its impact through the improved responsiveness of TAs and instructors.

- Use the AI assistant for academic and administrative questions.

- Get weekly summaries, reminders, and personalized content recommendations.

- Participate in course-level discussions and collaborative spaces moderated by AI.

While they are the largest user group, the system is designed primarily to support their learning through better instructor and TA engagement.

Tertiary Users

Administrators and **Developers** are the tertiary users.

They do not use the system for learning or teaching but play a key role in maintaining and improving it.

- Administrators:** Use analytics dashboards to track query trends, update FAQs, and ensure information accuracy.

- Developers/Support Team:** Handle integration, updates, and model optimization to keep the AI system accurate and efficient.

Their role is essential for smooth operations and long-term reliability of the system.

02 User Stories

- 1 As a **TA**, I want repetitive student queries to be **auto-answered accurately**, so that I can **focus more on academic assistance** than on clerical responses.
- 2 As a **student**, I want to get **accurate answers to academic and administrative questions instantly**, so that I **don't waste time searching** through multiple portals or PDFs.
- 3 As an **instructor**, I want **insights into student engagement patterns**, so that I can **plan interactive sessions and maintain motivation** throughout the term.
- 4 As a **student**, I want **automated weekly summaries** of lectures, announcements, and tasks, so that I can **stay organized** without manually tracking every update.
- 5 As a **TA**, I want a **curated list of high-quality learning tools and references**, so that I can **quickly guide students** instead of spending hours researching.
- 6 As a **student**, I want **personalized resource suggestions** related to IITM lecture topics, so that I can **easily understand complex subjects** without endless searching.
- 7 As an **instructor**, I want **summarized reports of confusing topics**, so that I can **refine lecture delivery and provide targeted clarifications**.
- 8 As a **TA**, I want frequent student **doubts automatically summarized** from chat forums and emails, so that I can identify and **address common learning issues efficiently**.
- 9 As a **TA**, I want unresolved or delayed **queries to be tracked and prioritized**, so that I can **manage my workload and response time effectively**.

10 As a **student**, I want my queries to **automatically reach the right instructor or TA**, so that I get **timely and accurate responses** without confusion.

13 As a **new TA**, I want a **personalized onboarding guide based on senior TAs' experiences**, so that I can **adapt faster to academic and communication expectations**.

16 As an **administrator**, I want to **view analytics of frequently asked questions and unresolved queries**, so that I can **identify policy gaps and improve institutional resources**.

11 As an **instructor**, I want **summarized discussion threads grouped by topic**, so that I can **easily review student challenges before class**.

14 As an **instructor**, I want to **auto-generate question papers of varying difficulty with editable templates**, so that I can **save time preparing balanced assessments**.

17 As an **instructor**, I want to **see patterns in student confusion and feedback sentiment**, so that I can **adapt my teaching strategies accordingly**.

12 As a **student**, I want to **quickly find if my question has been discussed earlier**, so that I **don't waste time posting duplicates**.

15 As a **TA or instructor**, I want to **convert structured course notes into visually consistent slides**, so that I can **create professional teaching material quickly without manual formatting**.

03 Interviews

SR. No.	Interviewee	His/her Details	Interviewer	Proof Drive link
1	S Satyanarayana	Course instructor	Nooha Rahman	Link1
2	Pulkit Mangal	Intro to DL and GenAi TA	Aryan Kumar	Link2
3	Abhijit Kumar	Previously Stats and MLF TA	Aryan Kumar	Link3
4	Saranath P	TA : Data Science and AI Lab	Laxmi Kumari	Link4
5	Sujal Raj Pradhan	Currently working as TDS TA	Mohit Raj Rathor	Link5
6	Md Athar	Student	Nooha Rahman	Link6
7	Bhavya	BS Electronic Student at IITM	Taniya Chouhan	Link7
8	Jhilmil Dutta	Administration intern	Nooha Rahman	Link8
